

Ballistic Rubber Tiles (Safety Walls)

Rubber Source offers 2 models of Ballistic Rubber Tiles (BRTs). They offer significant attributes compared to other rubber tiles used in shooting range environments. The Ballistic Tiles can be applied on walls, baffles, ceilings and floors. They facilitate the capture of bullets to prevent ricochets and lead splashback thereby drastically reducing lead dust. BRTs are also helpful in attenuating noise levels, a feature especially noticed on indoor ranges.

The tiles measure 2 ft. x 2 ft. and range in thickness of 1", 1-1/2" and 2". Colors available include black, red and green.
